Biofuel Friendly Products™

*Meeting ASTM D5798, D4806 or D6751 criteria.

The absence of the Biofuel Friendly Products™ logo by products in this catalog indicates those products are chemically compatible with traditional petroleum based fuels or oils, but not necessarily chemically compatible with the higher percentage blends of the new alternative biofuels. Refer to the Chemical Resistance Chart near the back of this catalog for more information by product series.

Changing Fuels Create Challenges

As we look to reduce our dependence on foreign petroleum based fuels, as well as reduce greenhouse gas emissions, the use of alternative biofuels such as ethanol and biodiesel continues to grow. This creates challenges in the fuel industry, as many existing petroleum transfer products were not designed with these alternative biofuels in mind.

That’s why Kuriyama is proud to introduce Biofuel Friendly Products™, a complete package of revolutionary fuel transfer hoses, couplings and accessories. Biofuel Friendly Products™ are specially engineered to resist the added strain caused by the ever-widening market use of the new high-percentage blends of biofuels – ethanol and biodiesel – while maintaining superior reliability transferring traditional petroleum based fuels – gasoline and diesel.

Look for the Biofuel Friendly Products™ logo. Whenever you see it you can be confident that you are providing the best fuel transfer solutions!
Tigerdrop™ Clear Drop Hose TDH™ Series Clear - “See-the-flow”

General Applications:
- Tank truck gravity drop fuel transfer

Construction: Polyurethane (TPU) tube with polyester fabric reinforcement, rigid PVC helix and embedded grounding wire.

Assembly Suggestion: Hose ID specifically designed for use with Kuriyama-Couplings™. Refer to page 24 for coupling installation and grounding information.

Service Temperature: -40°F (-40°C) to 140°F (+60°C)*

Features and Advantages:
- **Biofuel Compatible** – Revolutionary polyurethane compound! Specially designed to handle gasoline, ethanol**, diesel and biodiesel** ... and still keeps all the other great features and benefits!
- **Non-permeable polyurethane construction** – won’t swell or become stiff like conventional TPR/rubber hoses. Long life reduces operating costs.
- **Lightweight** – much lighter than conventional TPR/rubber hoses.
- **Superior flexibility** – especially in sub-zero weather!
- **“See-the-flow” construction** – for visual confirmation fuel is flowing.
- **Durable Construction** – Designed with high tensile strength polyester yarn fabric reinforcement.
- **Grounding Wire** – Durable multi-strand copper wire dissipates static electricity. Physically extract wire from the rigid helix and bond to the metal coupling (or by other means) to ground.†
- **Easy Slide Helix** – Rigid counter clockwise helix design protects hose tube from cover wear; allows hose to slide easily over rough surfaces.

Made In USA

KPPCA0413
Tigerdrop™ NDH
Drop Hose
NDH™ Series
Black static
dissipating tube

General Applications:
• Tank truck gravity drop fuel transfer

Construction: Specially blended nitrile (NBR) rubber tube with polyester fabric reinforcement, rigid PVC helix and embedded grounding wire.

Assembly Suggestions: Hose ID specifically designed for use with Kuriyama-Couplings™. Refer to page 24 for coupling installation and grounding information.

Service Temperature: -10°F (-23.3°C) to 150°F (+65.5°C)*

Features and Advantages:
• Specialty Rubber Compounds – Designed to handle gasoline, diesel, ethanol** and biodiesel.**
• Durable Construction – Designed with high tensile strength polyester yarn fabric reinforcement.
• Easy to Handle – Lighter weight and greater flexibility than conventional rubber drop hoses.‡
• Grounding Wire – Durable multi-strand copper wire dissipates static electricity. Physically extract wire from the rigid helix and bond to the metal coupling (or by other means) to ground.†
• Static Dissipating Tube – Specially formulated to help prevent the build-up of static electricity for added safety.
• Easy Slide Helix – Rigid clockwise helix design protects hose tube from cover wear; allows hose to slide easily over rough surfaces.

Tigervapor™
Vapor Recovery Hose
TV™ Series

General Applications:
• Tank truck vapor recovery

Construction: Polyurethane (TPU) tube with rigid PVC helix and embedded grounding wire.

Assembly Suggestions: Hose ID specifically designed for use with Kuriyama-Couplings™. Refer to page 24 for coupling installation and grounding information.

Service Temperature: -40°F (-40°C) to 140°F (+60°C)*

Features and Advantages:
• **Biofuel Compatible** – Revolutionary polyurethane compound! Specially designed to handle gasoline, ethanol**, diesel and biodiesel** vapors... and still keeps all the other great features and benefits!
• Non-permeable polyurethane construction – won’t swell or become stiff like conventional TPR/rubber hoses. Long life reduces operating costs.
• Lightweight – much lighter than conventional TPR/rubber hoses.
• **Superior flexibility** – especially in sub-zero weather!
• “See-through” construction – for visual confirmation if fuel backs up into the vapor recovery system.
• **Grounding Wire** – Durable multi-strand copper wire dissipates static electricity. Physically extract wire from the rigid helix and bond to the metal coupling (or by other means) to ground.†
• **Easy Slide Helix** – Rigid counter clockwise helix design protects hose tube from cover wear; allows hose to slide easily over rough surfaces.

Tigervapor HD™
Vapor Recovery Hose
TVHD™ Series

General Applications:
- Tank truck vapor recovery

Construction: Polyurethane (TPU) tube with rigid PVC helix and embedded grounding wire.

Assembly Suggestions: Hose ID specifically designed for use with Kuriyama-Couplings™. Refer to page 24 for coupling installation and grounding information.

Service Temperature: -40°F (-40°C) to 140°F (+60°C)*

Features and Advantages:
- Biofuel Compatible – Revolutionary polyurethane compound! Specially designed to handle gasoline, ethanol**, diesel and biodiesel** vapors... and still keeps all the other great features and benefits!
- Heavy duty construction – thicker wall for longer hose life.
- Non-permeable polyurethane construction – won’t swell or become stiff like conventional TPR/rubber hoses. Long life reduces operating costs.
- Lightweight – much lighter than conventional TPR/rubber hoses.
- Superior flexibility – especially in sub-zero weather!
- “See-through” construction – for visual confirmation if fuel backs up into the vapor recovery system.
- Grounding Wire – Durable multi-strand copper wire dissipates static electricity. Physically extract wire from the rigid helix and bond to the metal coupling (or by other means) to ground.†
- Easy Slide Helix – Rigid counter clockwise helix design protects hose tube from cover wear; allows hose to slide easily over rough surfaces.

Banding Coils
Rigid PVC Coils

- Easy assembly.
- Provides smoother surface for banding behind coupler.
- Packaged singly: One piece to make one complete hose assembly coupled at each end.
- Cut one piece in half into two equal pieces; thread between hose helix.
- Refer to Hose Assembly Coupling Installation Suggestions and Technical Bulletin in this catalog.

Oil Vac™
OV™ Series
Heavy Duty Oil Resistant Polyurethane Suction Hose

General Applications:
• Material handling - heavy duty abrasive
• Material chutes
• Oil suction – heavy duty

Construction: Polyurethane tube with rigid PVC helix.

Service Temperature: -40°F (-40°C) to 150°F (+65°C)*

Features and Advantages:
• Oil Resistant Polyurethane Tube – Handles most fuels and oils. Excellent resistance to gasoline, diesel, ethanol, blends (up to E30) and biodiesels (up to B100).
• Abrasion Resistant Polyurethane Tube – Solid polyurethane tube outlasts other materials when severe abrasion is a factor. Provides for longer hose life and lower operating costs versus rubber or PVC hoses.
• Transparent Construction – “See-the-flow.” Allows for visual confirmation of material flow.
• “Cold-Flex” Materials – Hose remains flexible in sub-zero temperatures.

ORV™ Series
Heavy Duty
Oil Resistant
PVC Suction Hose

General Applications:
• Environmental cleanup
• Oil skimming
• Oil slurry
• Oil suction
• Vapor recovery – hydrocarbon emissions

Construction: Oil resistant PVC tube with rigid PVC helix.

Service Temperature: 5°F (-15°C) to 150°F (+65°C)*

Features and Advantages:
• Oil Resistant PVC Tube – Made with special oil resistant compounds which exhibit medium resistance to oil and other hydrocarbons.
• Smooth Outer Cover – Provides increased pressure rating and smooth surface for banding.

★ T605 is not recommended for use on a reel.

**COUPLING SUGGESTIONS**
Quick-Acting, combination nipples attached with bands or clamps or internally expanded couplings with gasket seal attached with ferrules.

★ Kuriyama offers a full line of Quick-Acting couplings, pin lug shank couplings and combination nipples. Refer to current Kuriyama-Couplings™ and Accessories Catalog for type and pricing.

BECAUSE WE CONTINUALLY EXAMINE WAYS TO IMPROVE OUR PRODUCTS, WE RESERVE THE RIGHT TO ALTER SPECIFICATIONS WITHOUT PRIOR NOTICE.
Applications:
For suction and discharge applications in truck and tank car transfer of gasoline, oil and other petroleum-based products with up to 50% aromatic content.

Cover:
Red CR — abrasion and ozone resistant.

Reinforcement:
High tensile textile cords and highly flexible steel helix wires.

Tube:
Black conductive NBR.

Temperature Range:
-22°F (-30°C) to 176°F (+80°C)

Standard Length:
100 feet

Working Pressure:
Constant Pressure 150 PSI

Branding:
ALFAGOMMA – ITALY T605 – 10 BAR (150 PSI)
PETROLEUM – S & D (in yellow letters)

Hose Assembly Coupling Installation Suggestions
for Tigerflex™ Series TDHTM & NDHTM Gasoline Drop Hoses & Series TVTM & TVHDTM Gasoline Vapor Recovery Hoses using Tigerflex™ Banding Sleeves or Banding Coils

**WARNING!**
Failure to properly couple a hose or ensure continuity can result in property damage and serious or life-threatening injury!
Kuriyama of America, Inc. shall not be liable if you do not follow the procedures outlined below.

For safety, Kuriyama of America, Inc. strongly suggests that any hose assembly used to transfer gasoline or gasoline vapors be bonded to ground before being put into service.

Tigerflex™ Hose Series TDHTM, NDHTM, TVTM and TVHDTM are manufactured with a stranded copper wire in the rigid PVC helix. The wire is to be physically extracted from the helix and bonded (connected) to ground through the metal coupler/fitting, or by other means. A properly bonded/grounded hose assembly should measure less than 10 ohms.

The person assembling the couplings to the hose should know how to check the hose assembly for continuity by properly using a continuity meter and/or an ohmmeter. Contact Kuriyama for training information.

**Note: Visual inspections should be conducted on a regular basis to ensure the hose assembly’s continued safety.**

**Step 1** — Prior to coupling, check the grounding/bonding wire in the cut length of hose with a continuity meter or ohmmeter (ohmmeter should read less than 10 ohms).

**Step 2** — Using a sharp knife, cut the flex around the circumference of the hose approximately 2”.

**Step 3** — Using the knife, make a light cut around the entire circumference of the hose’s rigid helix. Be careful not to cut too deeply into the helix, to avoid damaging the grounding wire. TIP: Cut all the way through the urethane (TDH, TV or TVDH) or nitrile (NDH) flex, but only score the underside of the helix.

**Step 4** — Grasp the end of the hose’s helix and carefully bend it back and forth until the helix snaps off. Be careful not to break the copper grounding wire.

**Step 5** — Gently pull the broken end of the hose’s helix off the copper wire. TIP: Pull with the curve of the helix.

**Step 6** — Twist the copper grounding wire strands together and tuck the wire inside the hose.

**Step 7** — Screw approximately 12” of banding sleeve onto the hose (use appropriate lubricant as needed). Or, thread the banding coil between the helixes onto the hose. Slip the banding clamps onto the hose. TIP: When using banding coils tighten clamps in a clockwise direction for TDH, TV and TVHD and counterclockwise direction for NDH, to better tighten down the hose on the coupling shank.

**Step 8** — Insert the coupler’s barbed shank into the hose, twisting counterclockwise for TDH, TV and TVHD and clockwise for NDH as it enters. For ease of installation, an appropriate lubricant may be used.

**Step 9** — Insert the coupler into the hose until the hose seats against the bottom of the coupler.

**Step 10** — Check continuity/ohmmeter reading again, between the fittings on each end.

**Step 11** — Install two hose clamps over the hose end above the coupling. When using banding coils, be sure to tighten clamps in a clockwise direction for TDH, TV and TVHDTM, and a counterclockwise direction for NDH, so the banding coils tighten down on the hose.

**Step 12** — Check continuity/ohmmeter reading again, between the fittings on each end of the hose assembly. The resistance should measure less than 10 ohms.

**Because we continually examine ways to improve our products, we reserve the right to alter specifications without prior notice.**
1. How are Tigerflex™ BIOFUEL FRIENDLY PRODUCTS™ hoses different from other brand hoses?

Tigerflex™ brand hoses are well known for their lightweight, easy-to-handle and long-life features. Tigerflex™ brand BIOFUEL FRIENDLY PRODUCTS™ drop and vapor recovery hoses are revolutionary! They are constructed with non-permeable thermoplastic polyurethane (TPU) tubes. Traditional thermoplastics, while providing exceptional lightweight and flexibility features, were not chemically compatible for fuels of more than 30% ethanol blended (E30).

But the new Tigerflex™ brand BIOFUEL FRIENDLY PRODUCTS™ hoses, utilizing the latest advancements in TPU development, have been lab and field proven to remain crack and leak resistant under the harshest conditions. They easily handle conventional oxygenated and reformulated gasoline blends; ethanol blends (up to E98); ultra low sulfur (ULS) diesel; and bio-diesels (up to B100 which meet ASTM D 6751 criteria). The Tigerflex™ BIOFUEL FRIENDLY PRODUCTS™ hoses are truly revolutionary!

2. What are ethanol blends – E10, E85, E98, E100?

E10 (gasohol) is a fuel blend containing 10% ethanol and 90% gasoline; E85 is 85% ethanol and 15% gasoline; E95 is 95% ethanol and 5% gasoline; and so on. E100 is ethyl alcohol (grain alcohol). Many common plastics and rubbers are chemically compatible with E100. Yet, E100 is almost never used or transported in the U.S. fuel industry because E100 is taxed as alcohol (liquor). Gasoline is added to render the fuel unsuitable for human consumption, and thus not subject to alcohol taxes. Adding gasoline changes the chemical composition whereas materials that are compatible with E100 are not compatible with an E98 fuel blend.

Kuriyama® BIOFUEL FRIENDLY PRODUCTS™ products can be used with all percentage blends of ethanol fuel.

Metal couplings compatibility: Aluminum (good), Stainless Steel (excellent).

3. What is biodiesel – B20, B100?

Biodiesel is a non-fossil fuel alternative to petroleum diesel. ASTM International has developed standard D6751 as the specification standard for 100% biodiesel (B100). Biodiesel is generally used for blending with petroleum diesel. For example, B20 is a fuel blend of approximately 20% biodiesel and 80% traditional petroleum diesel. ASTM D6751 is the specification for biodiesel fuels that needs to be met, irrespective of the feedstock source and/or processing method. Biodiesels which meet the ASTM D6751 criteria have the same chemical compatibilities to hoses and accessories as traditional petroleum diesel.

It is suggested that biodiesel fuels be sourced from accredited BJ-9000 Producers and BJ-9000 Marketers to assure the biodiesel fuel meets the ASTM D6751 criteria.

Kuriyama® BIOFUEL FRIENDLY PRODUCTS™ hose products can be used with all percentage blends of biodiesels meeting the ASTM D6751 criteria.

Metal couplings compatibility: Aluminum (excellent), Stainless Steel (excellent).

4. What type of hose should be used for denatured ethanol (E95-E98) unloading at terminals?

We suggest our Alfagomma® series-T629AA – 150 PSI Black Biofuel Petroleum Suction Hose for bulk ethanol terminals. The Alfagomma® T629AA is a specially blended, heavy duty neoprene hose, well suited for these types of applications.

The Tigerflex™ Tigerdrop™ drop hose is a lightweight, user-friendly hose, designed for tank truck applications. However, it also has been used successfully at well maintained bulk ethanol facilities.

IMPORTANT: Extra care must be taken when handling denatured ethanol (E95-E98) – even more so than with traditional petroleum based fuels. The following procedures must be followed to ensure maximum hose service life:

1. Hose should be drained and unhooked from the pump after each use. Properly draining and unhooking the hose will protect it from damaging denatured ethanol vapors. American Petroleum Institute Recommended Practices No. 1007, section 5.4, states that, “When pumping is finished the driver should walk the suction hose to the pump... Place any residual product into approved container.”

2. Hose should be kept in a properly designed, ( U shaped), storage rack when not in use. Use of storage rack will help ensure the hose is properly drained after each use; as well protect the hose from being accidentally run over.

3. Keep hose in a shaded area when in use. Do not expose hose to direct sunlight. Excessive UV exposure can damage any hose.

4. Thoroughly inspect hose before, during and after each use. If the hose is not fully drained after each use the denatured ethanol remaining in the hose can release damaging vapors, this is especially true at high temperatures. When the air temperature exceeds 90° F, the temperature of ground, concrete, asphalt or stone surface upon which the hose may be lying can be in excess of 150°F. At temperatures in excess of 110°F denatured ethanol has been shown to percolate, releasing damaging vapors. These vapors can permeate the hose at a much higher rate than the liquid fuel, and can substantially reduce the service life of the hose. Ethanol vapors are extremely damaging, more so than petroleum based fuel vapors.

5. Can I leave gasoline or E85 inside the hoses when not in use?

We strongly recommend that all fuel transfer hoses are fully drained after each use. Per American Petroleum Institute Recommended Practices No. 1007, Section 4, when unloading to underground storage tanks, to “Disconnect the delivery hose at the tank truck and “roll” it to the receiving tank to be sure it is completely drained.” In addition, vapor recovery hoses used in distribution terminal loading racks must be regularly inspected and drained as fuel will tend to collect in the hoses. At high temperatures these fuels can percolate, releasing damaging vapors which can attack the hose and shorten service life.

6. Do drop and vapor recovery hose need to be grounded?

For added safety, Kuriyama of America, Inc. strongly suggests that any hose assembly used to transfer fuel or fuel vapors be bonded to ground before being put into service. (Refer to Hose Assembly Coupling Installation Suggestions in the catalog.) Embedded grounding wires should be physically extracted from the hose and bonded (connected) to ground through the metal coupler, or by other means.
American Petroleum Institute Recommended Practice No. 2003 (API RP-2003) and the National Fire Protection Association (NFPA) Standard No. 385 both state that hoses transferring gasoline to underground storage tanks (UST’s) need not be bonded as long as they are used with “closed (tight) connections”. API defines “closed connections” as a connection in which before flow starts and is broken after flow is completed. In summary, for gravity drop and vapor recovery applications, the user must make sure the hose assemblies are properly connected before starting the flow. Static dissipating and conductive hose tube material offer an added dimension of safety. Nonetheless, the electrical resistance of any hose transferring gasoline should measure less than 10 ohms (<10Ω). On all Tigerflex™ BIOFUEL FRIENDLY PRODUCTS™ hoses:

a) “USE WITH CLOSED CONNECTIONS” is printed on the layline.

b) A bright red PVC spiral band imprinted with “WARNING – GROUND HELIX WIRE (LESS THAN 10 OHMS)” is attached to each hose at approximately 10-ft. intervals.

7 How do I check a hose or hose assembly for continuity, or “less than 10 ohms”?

A continuity meter is a simple device that shows if a circuit is continuous; the light goes on when the probes are connected to either end of the hose or hose assembly, indicating continuity. Note: smaller continuity meters may be more accurate than larger-sized devices.

A common multimeter can also be used to measure a hose assembly for less than 10 ohms resistance. The less the amount of resistance, the easier the electrons flow through to ground. The electrical symbol for ohms is Ω.

Either of both methods can be used to test whether a hose assembly is “good” to put into service. Either device can be found at hardware stores and home centers. Devices vary, but, in general, with either device, simultaneously touch one probe to each metal coupling on the ends of the hose assembly. A “good” hose assembly with be indicated by either the light going on, or the reading of less than 10 ohms (Ref. API RP-2003; NFPA RP-77). For unassembled hoses, simply touch one probe to the grounding wire at each end of the hose.

8 Should one use banding sleeves or banding coils?

Screwing on approximately 12-inch length banding sleeves provides both a smooth surface for banding clamps, and also provides support behind the coupling – the most common stress area of a hose assembly. Threading a banding coil between the hose helixes provides a smoother surface for banding. Both have been used quite successfully.

9 Care, Maintenance and Storage of Tigerflex™ Hose.

Proper storage conditions and handling procedures can enhance and substantially extend the ultimate life of Tigerflex™ hose. Hose has limited life and the user must be alert to signs of impending failure. The service life of our hose is dependent upon the user’s application. Since we have no control over the way in which the hose is used, we do not warrant our hose for any particular service life.

Tigerflex™ hose should not be subjected to any form of abuse in storage or service. Care should be taken to protect the hose from heavy load factors. Hose should be stored flat on smooth surfaces, and should not be stacked more than six coils high. Stacking hose higher than this could cause the compression load factor on the bottom coil to exceed the hose’s design load limits, causing the bottom coil to flatten out.

Hose should not be stored outdoors due to potential damage from the elements, which may shorten hose life. Hose should not be stored in an upright manner, as this can cause the round coils to become egg shaped, and that stress can cause a deterioration of the hose. Hose should not be kinked or run over by any equipment. In the handling of larger ID hose, dolies should be used in transporting whenever possible. Slings or handling rigs, properly placed, should be used to support heavier hose.

Cautionary Statement

All Products sold and distributed by Kuriyama of America, Inc. are in the nature of commodities and they are sold by published specifications and not for particular purposes, uses or applications. Purchaser shall first determine their suitability for the intended purposes, uses or applications and shall either conduct its own engineering studies or tests, or retain qualified engineers, consultants or testing laboratories and consult with them before determining the proper use, suitability or propriety of the merchandise or Products for the intended purposes, uses or applications.

Kuriyama of America, Inc. ("Seller") does not recommend the Products for any particular purpose, use or application, and the Purchaser or user thereof shall assume full responsibility for the suitability, propriety, use and application of the Products. Purchaser shall follow all instructions contained in Seller's catalogs, brochures, technical bulletins and other documents regarding the Products. The Products, including but not limited to, hose, tubing or couplings, may fail due to the use or conveyance of substances at elevated or lowered temperatures or at excessive pressure, the conveyance of abrasive, injurious, flammable, explosive or damaging substances. Hose or tubing used in bent configurations will be subjected to increased abrasion. Hose clamps or couplings may loosen after initial installation and all sections of hose and tubing including connections, couplings, clamps, conductivity and bonding should be inspected frequently, regularly and consistently, and should be replaced, adjusted or re-tightened for the avoidance of leakage, for the prevention of injuries or damages, and for general safety purposes. Except as indicated in its Limited Warranty, Seller shall not be liable or responsible for direct or indirect injuries or damages caused by or attributed to the failure or malfunction of any Products sold or distributed by it.

Purchasers or users of the Products should frequently and consistently undertake inspections and protective measures with respect to the use and application of Products, which should include the examination of tube and cover, conditions of the hose or tubing, and the identification, repair or replacement of sections showing cracking, blistering, separations, internal and external abrasions, leaking or slipped couplings or connections, and make proper proof tests.

Limited Warranty

The Products sold or distributed by Seller are warranted to its customers to be free from defects in material and workmanship at the time of shipment by us, subject to the following provisions. ALL WARRANTY CLAIMS SHALL BE MADE WITHIN SIX (6) MONTHS AFTER SELLER SHIPPED THE PRODUCTS. SELLER'S LIABILITY HEREUNDER IS LIMITED AT SELLER'S EXCLUSIVE DISCRETION, TO 1) THE PURCHASE PRICE OF ANY PRODUCTS PROVING DEFECTIVE; 2) REPAIR OF ANY DEFECTIVE PRODUCT OR PART THEREOF; OR 3) REPLACEMENT OF ANY DEFECTIVE PRODUCT OR PART UPON ITS AUTHORIZED RETURN TO SELLER.

IN NO EVENT SHALL SELLER OR THE MANUFACTURER OF THE PRODUCT BE LIABLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, INCLUDING LOSS OF PROFITS, WHETHER OR NOT CAUSED BY OR RESULTING FROM THE NEGLIGENCE OF SELLER AND/OR THE MANUFACTURER OF THE PRODUCT, UNLESS SPECIFICALLY PROVIDED HEREIN. IN ADDITION, THIS WARRANTY SHALL NOT APPLY TO ANY PRODUCTS OR PORTIONS THEREOF WHICH HAVE BEEN SUBJECTED TO ABUSE, MISUSE, IMPROPER INSTALLATION, MAINTENANCE, OR OPERATION, ELECTRICAL FAILURE OR ABNORMAL CONDITIONS, AND TO PRODUCTS WHICH HAVE BEEN TAMPERED WITH, ALTERED, MODIFIED, REPAIRED, REWORKED BY ANYONE NOT APPROVED BY SELLER, OR USED IN ANY MANNER INCONSISTENT WITH THE PROVISIONS OF THE "CAUTIONARY STATEMENT" ABOVE OR ANY INSTRUCTIONS OR SPECIFICATIONS PROVIDED WITH OR FOR THE PRODUCT.
